

Meeting Minutes – Client Meeting (1st)

Project: VOC Sensor Data Pipeline for Disease Monitoring
Date: 11 February 2026
Stakeholder: Eyuel Ayele
Participants:

- Adityanand Singh
 - Faezeh Kianimoravej
 - Sepideh Qorbani
-

1. Purpose of the Meeting

The purpose of this meeting was to introduce the project, clarify the expectations from the client, and understand how the student team should begin working with the provided dataset. The discussion focused on the initial steps for exploring the data and setting up the project repository.

2. Project Context

The project focuses on developing a data pipeline for processing VOC sensor data used in disease monitoring research. The goal of the project is to design and implement a system that can ingest, process, and analyze the dataset in a structured and reproducible way.

During the meeting, the stakeholder emphasized that the team should first focus on understanding the dataset before moving on to more complex pipeline implementation tasks.

3. Key Discussion Points

Dataset Exploration

The stakeholder advised the team to begin by exploring the dataset and attempting to run the data locally. This initial exploration will help the team understand the structure of the dataset and identify potential challenges.

It was expected that during this phase the team may encounter several questions related to the dataset and processing pipeline.

Repository Setup

The team mentioned that a GitLab repository had already been created for the project. The possibility of switching to **GitHub** was also discussed.

The stakeholder indicated that the choice of repository platform is not critical as long as the project structure and code are properly maintained. However, it was suggested that the team should consult with **Peter** regarding the preferred platform for the project.

Communication

The stakeholder confirmed that the team can contact him if questions arise while working with the dataset or the project structure.

4. Decisions Made

- The team will start by exploring and running the dataset to understand its structure.
 - The team will consult with Peter regarding the preferred repository platform.
 - If needed, the repository can be migrated from GitLab to GitHub by copying the existing project structure and code.
-

5. Action Items

| Action |-----|-----| | Explore the dataset and understand its structure | Attempt to run the dataset locally | Ask Peter about the preferred repository platform (GitLab or GitHub) | Document any questions or issues encountered during dataset exploration

6. Open Questions

- Which repository platform should be used for the final project (GitLab or GitHub)?
 - Are there any specific guidelines from the supervisor regarding repository organization?
-

7. Next Steps

1. The team will begin exploring the dataset and running initial experiments.
 2. Any questions or technical issues will be documented.
 3. The team will follow up with the stakeholder if clarification is required.
-

8. Notes

The stakeholder emphasized that the team should focus first on understanding the dataset and attempting to run it, as this process will naturally reveal questions and potential improvements for the data pipeline.

The team confirmed that they will review the dataset and continue communication with the stakeholder if needed.
