

Meeting Minutes – Client Meeting (2nd)

Project: VOC Sensor Data Pipeline for Disease Monitoring

Date: 02 March 2026

Time: 11:30 - 12:00

Stakeholder: Eyuel Ayele

Participants:

- Adityanand Singh
 - Faezeh Kianimoravej
 - Sepideh Qorbani
-

1. Purpose of the Meeting

This was the second client meeting to align the student team on how to proceed with the project work, especially regarding comparing the current codebase against the requirements document and establishing a working run first.

2. Project Context

N/A (specific project context beyond the workflow guidance was not clearly stated in the provided transcript segment).

3. Key Discussion Points

- Initial greeting and audio check between the participants.
- Eyuel advised the team to start by:
 - going to the requirements document,
 - seeing what is missing in the current code,
 - running the project locally,
 - then using the run/understanding results to compare with the requirement document.
- Eyuel emphasized a phased approach:
 - first make the code **run** and **understand it**,
 - then use the requirements to guide the next steps (including refactoring/restructuring if needed).
- Eyuel suggested that work can be done **in parallel**, but **priority** should remain on getting the code running and understanding it.
- Communication guidance:
 - send quick questions by **email** rather than waiting until the next bi-weekly client discussion.

- o don't delay if clarification is needed; waiting could reduce helpful touchpoints.
-

4. Decisions Made

No explicit decisions were captured in the provided transcript segment.

5. Action Items

Action	Responsible
Review the requirements document and identify gaps vs the current codebase	Student Team
Run the project locally and document what is understood	Student Team
Compare the running behavior against the requirements to determine next improvements	Student Team
If unsure or blocked, send questions by email (instead of waiting two weeks)	Student Team
Track questions/issues to bring forward in the next bi-weekly client discussions	Student Team

6. Open Questions

- How the project will be refactored/restructured to fully match the requirements (to be addressed after the initial run and understanding).
-

7. Next Steps

1. Begin by reviewing the requirements and mapping it to the current code.
 2. Focus on getting the code running locally and understanding system behavior.
 3. If questions arise, contact Eyuel by email immediately; continue regular bi-weekly discussions as planned.
-

8. Notes

Eyuel highlighted that quick follow-ups are preferable due to limited available time, and encouraged emailing for faster clarification.
